The bar of osmium presents a totally different appearance from the iridium, and resembles a mass of ordinary coke. Ruthenium is the only one of these extremely rare metals which is shown in small quantity, being represented by a few masses about the size of peas. In the series of metals cast in rods, weighing one kilogram each, for the purpose of showing their bulk relatively to their weight, the metals which oxidize rapidly on exposure to the air, and quicksilver, which is fluid at ordinary temperatures, are confined in glass tubes. These tubes have the same internal diameter as all the rods of the series--about oneinch. The platinum cylinder is about four inches long; the quicksilver about seven inches; and the others elongate by a...
