Reviews

The most effective publication i at any time go through. This is certainly for all those who statte that there had not been a worthy of looking at. Its been printed in an extremely straightforward way which is merely soon after i finished reading this publication where basically changed me, change the way in my opinion.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 648 pages. Dimensions: 9.7in. x 7.4in. x 1.3in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1920 edition. Excerpt: . . . 25 calcium, which makes a brine weighing about 80 pounds to the cubic foot, so that 626 cubic feet at 80 pounds to the cubic foot totals 50, 080 pounds; and on a basis of 25 calcium by weight, there is required 12, 520 pounds of calcium, or say roughly 6 tons. From this you can readily appreciate why you have been unable to get a satisfactory strength of brine by using only a little more than 4 tons of calcium. You need at least 50 more calcium to bring it up to the proper density. FUEL on. CONSUMPTION. To the Editor: -e have a 30-ton ice-making plant, virtually new, using fuel oil and burning 30 barrels in 24 hours, which we believe is too much oil. There is another plant within 18 miles of us that also has a 30-ton ice-making capacity and claims to use only 18 barrels of fuel oil each 24 hours. Ne are under the impression that we are using too much oil for fuel and would like to have your opinion. If we are using too much oil, can you suggest a remedy C. I. B. ANswl: R. --It is impossible for us to accurately answer your inquiry without knowing the heat unit value of the oil you are burning. Roughly estimating your fuel oil consumption, on a comparative basis of four barrels of oil equalling one ton of coal, you show only an average of four tons...
